Sathyabama Institute of Science and Technology (Deemed to be University) has published around 1142 Articles with a cumulative impact factor of 845 in the year 2020. However, for Academic Year 2019 to 2020, the cumulative impact factor is 506. It is a challenging task to find out the contribution of each author in each article. Moreover, authors publish their articles in different roles as First Author, Corresponding Author, and Co-Authors with intra-institutional or inter-institutional Collaboration.

In order to find the contribution of each author to the institution, the following points were considered for total Article Score Calculation

1. Position of the author and number of authors
2. Impact Factor
3. First and Corresponding authors from Sathyabama
4. Total Number of co-authors
5. Articles Published in Scopus/UGC CARE list or without Impact Factor
6. The average score citations for each Faculty (The sum of the average number of citations and h-index after joining from SATHYABAMA)

TOTAL ARTICLE SCORE CALCULATION:

Total Article Score = Article Score $_{\text{Authorship position}}$ + Author Citation $_{\text{Score}}$

TOTAL ARTICLE SCORE CALCULATION will be determined by applying the following seven conditions.

Condition 1 to 5 is applicable for Web of Science and Scopus indexed Journals with Impact factor

Conditions 1 to 4 are applicable for First Author or Corresponding Authors.

Authorships are counted only when the affiliation to the institute is given correctly in the affiliation/correspondence section in the Journals.

Present/Current address will not be counted as an affiliation.

Condition 5 is applicable for Co-Authors

Condition 6 is applicable for Web of Science/Scopus indexed journals without impact factor or those indexed in UGC CARE LIST Journals.

Condition 7 is applicable for Author Citation Score

- Condition – 1: If both the first & corresponding author is the same person or the article has a single author,

  Article Score First Author/Corresponding Author or Single Author = Impact Factor x 60

- Condition – 2: If both First Author and Corresponding Authors are from Sathyabama

  Article Score First Author/Corresponding Author = Impact Factor x 40

- Condition – 3: If First Author is from Sathyabama and Corresponding Author is from Other Institute

  Article Score First Author/Corresponding Author = Impact Factor x 20

- Condition – 4: If First Author is from Other Institute and Corresponding Author is from Sathyabama

  Article Score First Author/Corresponding Author = Impact Factor x 10

- Condition -5: For Co-Authors: Irrespective of conditions 1 to 4; the total number of Co-authors needs to be counted by excluding the First and Corresponding Authors.

$$\text{Article Score}_{Co-Author} = \frac{\text{Impact Factor} \times 20}{\text{Total number of Coauthors}}$$

- Condition – 6: Paper published in Web of Science/Scopus indexed journals without impact factor or those indexed in UGC CARE LIST Journals

$$\textit{Article Score}_{First\ Author/Corresponding\ Author} = 2\ point$$
$$\textit{Article Score}_{Co-Authors} = 1\ point$$

- Condition -7: The Article score citation is applicable for Sathyabama Affiliated Publications. The total number of citations of faculty from the date of joining (DOJ) in Sathyabama Affiliation (It is applicable for every author)

Average Citations = Total number of citations/Number of years from DOJ
h-Index of Author after joining in Sathyabama

$$\text{Article Score}_{Citations} = (\textit{Average Citations}_{(WoS)} + \text{h}\ index)_{WoS\ after\ joining\ Sathyabama}$$
